# Regulatory Guideline Summary

**Document ID:** REG-001 | **Version:** v1.0 | **Effective Date:** 2025-05-12 | **Author:** Kavya Nair

## 1. Overview of Global Regulatory Expectations

Regulatory health authorities including the FDA (21 CFR Part 11) and EMA (Annex 11) emphasize complete and verifiable traceability for all data used to demonstrate pharmaceutical safety, quality, and efficacy. Kavya Nair, Regulatory Affairs Manager, compiled this summary to support site compliance.

## 2. Statutory Audit Trail Obligations

Audit trails must remain operational at all times without administrative bypass. Computer systems must log who created, modified, or deleted records, along with exact UTC timestamps and documented reasons for change.

## 3. Storage and Cold-Chain Validation

Regulatory authorities require validated temperature mapping and monitoring systems. Temperature boundaries must be supported by stability profiles. Temperature controlled materials must be stored within validated limits such as 2 to 8 °C for refrigerated biological inventory.

## 4. Inspection Readiness Strategy

Inspection readiness requires proactive self-inspection and contemporaneous record reviews. Facilities must demonstrate robust change control and rapid access to unadulterated source documents.
