SOP-014 Cold-Chain Storage v2

Document ID: SOP-014-v2 | **Version:** v2.0 | **Effective Date:** 2024-11-05 | **Author:** Arjun Menon

1. Purpose

This procedure specifies storage conditions, cold-chain handling, and temperature monitoring standards for refrigerated pharmaceutical stock and bulk biological intermediates at Novacure Labs.

2. Scope and Specifications

Vaccine batches must be stored at 2 to 8 °C. Applies to primary cold storage warehouse chambers and inter-facility cold-chain transfers. Temperature must be checked and recorded manually twice daily.

3. Temperature Excursion Management

Temperature excursions of up to 12 hours do not require a deviation report. If an excursion exceeds 12 hours or rises above 12 °C, warehouse supervisors must notify the facility operations team.

4. Handling and Packaging

Cold boxes must be packed using certified gel packs conditioning between -2 °C and 0 °C prior to batch loading. Shipments must not exceed 48 hours transit duration without ice replenishment.

5. Author and Administrative Control

Authored by Arjun Menon, Cold-Chain Supervisor, Novacure Labs. Superseded by version 3.0 following revised risk assessment.
