# SOP-014 Cold-Chain Storage v3

**Document ID:** SOP-014-v3 | **Version:** v3.0 | **Effective Date:** 2025-06-20 | **Author:** Arjun Menon

## 1. Purpose

This standard operating procedure sets mandatory storage limits, continuous telemetric monitoring, and quarantine rules for all temperature-sensitive vaccine products at Novacure Labs, superseding SOP-014-v2.

## 2. Cold-Chain Specifications

Vaccine batches must be stored at 2 to 8 °C. Storage units must maintain calibrated NIST-traceable multi-point temperature sensors with real-time electronic alerting enabled 24/7.

## 3. Excursion Response Protocol

Any temperature excursion longer than 4 hours requires a deviation report. Upon detecting a temperature excursion exceeding validated boundaries for more than 4 hours, stock must be segregated into quarantine immediately.

## 4. Quarantine and QA Escalation

Physical quarantine cages and electronic warehouse holds must be applied instantly. The Cold-Chain Supervisor and QA Lead must initiate a deviation report within 24 hours pursuant to SOP-001.

## 5. Responsibilities and Author Control

Authored by Arjun Menon, Cold-Chain Supervisor. Approved by Dr. Meera Iyer, QA Head. Replaces and supersedes SOP-014-v2 in its entirety.
